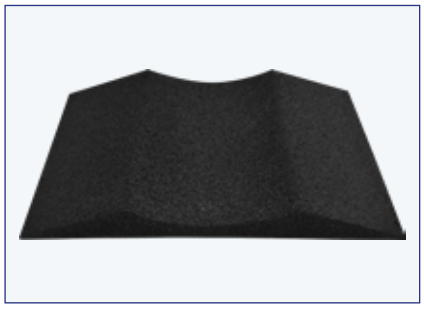
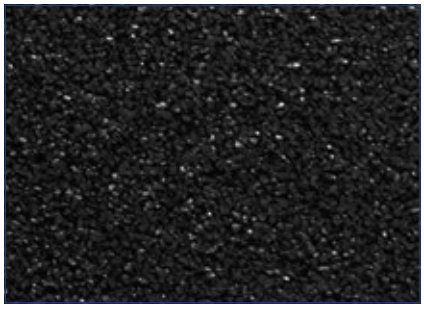
PROFIMAT® wheelprotect – data sheet





Application

PROFIMAT® wheelprotect is an elastic protection pad that can protect tyres (13-18 inch) from flat spots. Due to its elasticity the tyre pad adapts itself to the tyre and offers an optimal contact surface.
The product is equipped with a drive-on aid at the front and rear to ensure easy positioning of the vehicle. Due to its special shape, weight and anti-slip effect, the product remains in the intended position. PROFIMAT® wheelprotect can be used throughout the year.
The suitability of the surface must be checked if necessary.

Material

recycled rubber granules (typical rubber scent possible) bonded with polyurethane.

Summary of the IPW Report 532

The flat spot investigation carried out on a single reference tyre in comparison with a reference tyre on a single comparison object clearly confirmed the client's thesis in the selected test configuration: The tyre liner „PROFIMAT® wheelprotect" has contributed to reducing the intensity of the dynamic force variation by more than 25%.
